Department of Electrical Engineering 電機工程學系

學系介紹 Introduction

Electrical engineering is the foundation of high technology, including modern engineering and information engineering. The Department of Electrical Engineering was established in 1990. The curriculum is divided into three domains: Communications and Photonics, Signal and Control, and Energy and Power Systems. With our intensive and thorough training, students will graduate from the Department with exceptional competence.

獲獎紀錄 Award Records

- Fu-Li Yang received a silver medal award at the 2016 Taipei Int'l Invention Show and Technomart under the instruction given by Dr. Chun-An Cheng.
- Yung-Han Wu, Chun-Po Tang, and Ting-Wei Chuang received the Best Poster Award at the 2015 Conference on Photonics and Communications under the instruction given by Dr. Jung-Sheng Chiang.
- Shang-Yen Hu received a gold medal award at the 6th International Innovation and Invention Competition at the end of 2015 under the instruction given by Dr. Jung-Sheng Chiang.
- Dr. Jun-Zhe Yang received the Best Paper Award at the 36th Symposium on Electrical Power Engineering.
- Kuo-Heng Huang received the College Student Research Creativity Award with his college student research project from the Ministry of Science and Technology in 2014 under the instruction given by Dr. Chien-Hsuan Chang.
- Shao-Hsuan Chen was awarded a certificate of technician for water piping under the instruction given by Dr. Rong-Ching Wu.

在學生的話 Student Speak

Chih-Ming Lin, senior student, graduated from National Beigang Senior High School

I still remember that I felt relaxed and comfortable when I began my college life because the lessons were not as difficult as I thought and teachers were kinder than I expected. Although college students are freer than senior high school students, teachers of the Department still value our learning attitudes. I had so much fun in every class. I always pay all my attention to what teachers say in class and arrange my study time well so that I can do whatever I want in my leisure time. In the future, I want to pursue further education; therefore, it is important for me to give a brilliant academic performance. However, studying is not the only thing that matters in college life, just as the proverb goes: "Work hard, play hard."

Department of Electronic Engineering 電子工程學系

學系介紹 Introduction

Since its establishment in 1990, the Department of Electronic Engineering has graduated over 3,500 specialists working in the electronic engineering industry, the information industry, and other high technology industries and academic research institutes. To equip students with professional knowledge and practical experience required for relevant industries, in addition to required courses and general education courses, professional electives in VLSI, Microelectronics and Optoelectronics, and System Integration are offered. In the past three years, our students have given an outstanding performance in various national competitions in the field of electronic engineering by taking top three places.

Yun-Wen Chen, sophomore student, graduated from National Hsi-Hu Senior High School

This is my second year in the Department of Electronic Engineering, and I have grown fond of the Department because the theories taught by teachers in class are not as difficult as I expected thanks to interactive teaching methods and hands-on experiments. In addition to the knowledge gained from the class, I also learned a lot in the student association of the Department, such as interpersonal relationships and communication skills. I believe that the experiences I learned from being part of the student association can help me express confidence in the future. Through the participation in the orientation for new students and the barbecue event, I realized that the Department is a big family, and family members always help one another. Under the instruction given by teachers and in the company of classmates, I got a chance to make my dreams come true.

Department of Information Engineering 資訊工程學系

學系介紹 Introduction

The Department is IEET-accredited, and it has a stellar cast of faculty members, a well-developed curriculum framework, and up-to-date teaching facilities in order to equip students with interdisciplinary learning skills. The curriculum is divided into three domains: Network and Communication System, Multimedia System, and Embedded System.

Network and Communication System: We aim to foster specialists in network and communications, such as cybersecurity, cloud computing, Internet of Things, and wireless sensor network (WSN).

Multimedia Communication: We aim to foster specialists in digital video and image processing, such as video and image compression, video feature extraction, and multimedia information retrieval.

Embedded System: We aim to foster specialists in software and hardware, system integration who are capable of implementing the theories and algorithm of communication and multimedia in embedded systems.

畢業出路

Future Perspectives for Graduates

1. Further Education

Some of our graduates seek further education in the field of information engineering, while others choose to study in other fields based on their interests and the trend of industries with a solid foundation in information engineering.

2. Employment

With the penetration of computerization, our graduates have more job opportunities in different industries, including computer software and hardware R & D, cloud computing, digital content, Internet of Things, big data, mobile application design, network system construction, embedded systems, information security, database design and management, and e-commerce.

在學生的話 Student Speak

Pei-Hsuan Kuo, Kaohsiung Municipal Kaohsiung Vocational High School of Commerce

College life is an important stage for everyone, and fortunately I have had a happy life here at ISU so far. I am fond of programming, and I did learn a lot in the Department of Information Engineering, such as application and website design. In addition, the Department provides considerable resources, such as quadcopters and Kinects (the inspiration for my future study). During the past four years, I actively took part in student club and student association activities in order to build interpersonal networks and equip myself with soft power. This year I was successfully accepted by the Department of Computer Science and Engineering of National Sun Yat-sen University this year for postgraduate studies; however, I chose to stay here to pursue further education because I believe that I will embrace a brilliant and rosy future at ISU.

Department of Information Management 資訊管理學系

學系介紹 Introduction

With the rapid development of big data analysis, cloud service, Internet of Things, mobile devices, and mobile commerce, specialists in software, design, and management are in great demand. We aim to foster specialists in information management and application who acquire both theories and practical experiences, and our curriculum covers two specialization fields: Mobile e-Commerce and Cloud Service. The former puts emphasis on application development, mobile web design, social marketing, and website management, and internships in relevant industries are provided. The latter not only offers training in cloud computing technology, cloud platform service, and cost-benefit analysis but also helps students acquire professional certificates to enhance their competitiveness in the workplace.

In the past four years, I not only gained professional knowledge and skills here in the Department of Information Management but understood the development of the information management industry through the introduction and analysis from our teachers. In addition to considerable resources and up-to-date teaching facilities the Department provides, courses are designed especially for students to learn effectively. After the class, course instructors formed a study group with us and offered further assistance to us. With the interaction between course instructors and students, learning became more interesting, and we became more like friends than teacher-student. In sum, the Department provides both professional knowledge and an excellent learning environment, making us a competitive specialist in information management.

Department of Communication Engineering 通訊工程學系

學系介紹 Introduction

The output value of communication-related industries has been increased year after year, and communication technology has been the foundation for computer motherboards, mobile phones, Internet of Things, fiber-optic communication, healthcare communication, and IC design. Established in 2002, the Department of Communication Engineering puts emphasis on Networking & Communication and Optoelectronics & Communication, in the hopes of fostering specialists in communication engineering demanded by relevant industries. Our graduates are equipped with professional knowledge and practical skills. They can either pursue further education at national universities or work as an R&D engineer in the Industrial Technology Research Institute or a software/hardware engineer at hi-tech companies.

Department of Mechanical and Automation Engineering 機械與自動化工程學系

學系介紹 Introduction

Mechanics is the mother of industry. All industries rely on machinery for production. With the training offered by the Department, graduates are competent to secure employment in traditional industries or hi-tech companies or be admitted to mechanics- or management-related postgraduate programs for further education.

The Department is mature enough to provide students with up-to-date teaching and research equipment, professional knowledge, cultivation of logical thinking, and training on design and analysis. In addition to basic training you can see in other departments of mechanical engineering, we put great emphasis on hands-on experience, industrial design software (CAD/CAM/CAE), and mechatronics. In recent years, research on advanced energy, micro-nano materials, and biotechnology and bioengineering are subsumed under our curriculum.

實習機會 Internship Providers

Traditional industries: Yieh Phui Enterprise Co., Ltd., Yieh United Steel Corp., Tongtai Machine & Tool Co., Ltd.

Hi-tech companies: ASE Group, Orient Semiconductor Electronics, Ltd., Primax Electronics Ltd. (Dongguan, China)

未來出路 Future Perspectives for Graduates

Further Education: Graduates may pursue further education in the field of mechanics, energy, electrical engineering, optoelectronics, aeronautics and astronautics, automobile, refrigeration and air conditioning, business administration, etc.

Employment: Graduates are capable of handling tasks with what they have learned here in both traditional industries and hi-tech companies, including semiconductor, electronics, automobile, aeronautics and astronautics, shipbuilding, railway (Taiwan railway, high speed rail, metro), Metal Industries Research & Development Center, Industrial Technology Research Institute, etc.

在學生的話 Student Speak

Yi-Tzu Chen, junior student, graduated from Chi-Ying Senior High School

Mechanics is the mother of industry. Not until I studied at the Department did I realize that mechanics is not all about traditional technicians. On the contrary, hi-tech elements are included in order to improve the quality of work and working conditions. Faculty members of the Department are conscientious and professional, and they are good at training analytical and problem-solving skills with cases happening in our life. Therefore, we can not only put what we have learned into practice but also acquire professional competence as an engineer. In terms of extracurricular activities, the student association of the Department has held several activities, such as camping for new students and sports meets, for us to train our body and strengthen the bond between classmates. The Department is not only a warm and vital family but a cradle of mechanical engineers.

Department of Chemical Engineering 化學工程學系

專業實習 學以致用

學系介紹 Introduction

Chemical engineering is a discipline of applied sciences, covering the application of nanotechnology, semiconductor, and biotechnology. Departments of chemical engineering have become the first choice at the college of science and engineering at many universities and colleges. In response to the development trend of technology, the Department designs its curriculum with theories and practice, emphasizing both lectures and experiments. In addition to the three major domains (biotechnology, materials science, process technology) offered by the Department, inter-college courses are also provided. Furthermore, the Department arranges for junior students to undertake off-campus internships at CPC Corporation, ASE Group, Shiny Chemical Industrial Co., Ltd., etc., during summer vacation or semesters, in the hopes of improving our competitive edge. Our curriculum was accredited by the IEET, and graduates of the Department can choose to study abroad for further education.

在學生的話 Student Speak

Yu-Man Sun, graduated from National Kangshan Senior High School

An internship is a great opportunity for us to put what we have learned into practice and understand whether it is the right direction we want to go. Fortunately, I have chosen the right path for my future. I hope this kind of internships can be continuously provided so that junior classmates can have hands-on experience.

ISU 義守大學

Department of Financial and Computational 財務與計算數學系

學系介紹 Introduction

The Department emphasizes both theories and practice while designing the curriculum covering mathematical logic, finance, information computing, etc., in order to equip students with fundamental mathematical logic and analytical skills as well as interdisciplinary knowledge of financial management, financial analysis, data processing, information science, and programming. The Department a) provides adequate teaching and learning facilities and comprehensive courses in mathematical logic, finance, and information, b) helps students acquire professional certificates, and c) offers internship opportunities at corporations. After graduation, graduates may pursue further education about or work in the field of finance, statistical analysis or information computing. In addition, ISU has gone into partnership with hundreds of foreign universities; therefore, students can apply for student exchange to broaden their horizons.

畢業出路

Future Perspectives for Graduates

Further Education

Many of our graduates are admitted to famous national and private universities to seek further education in different fields, including information engineering, industrial management, statistics, marine economy, mathematics, applied mathematics, finance, economics, actuarial science, insurance, information management, and educational statistics.

Employment

Some graduates teach at universities, senior high schools, and junior high schools; establish their own cram schools, teaching software development, web design, and multimedia production; work on quality control or statistical analysis in computer or communication industries; or serve as an actuary or development engineer in the financial sector.

在學生的話 Student Speak

Chia-Chi Chen, senior student, graduated from Pin Hwa High School in Malaysia

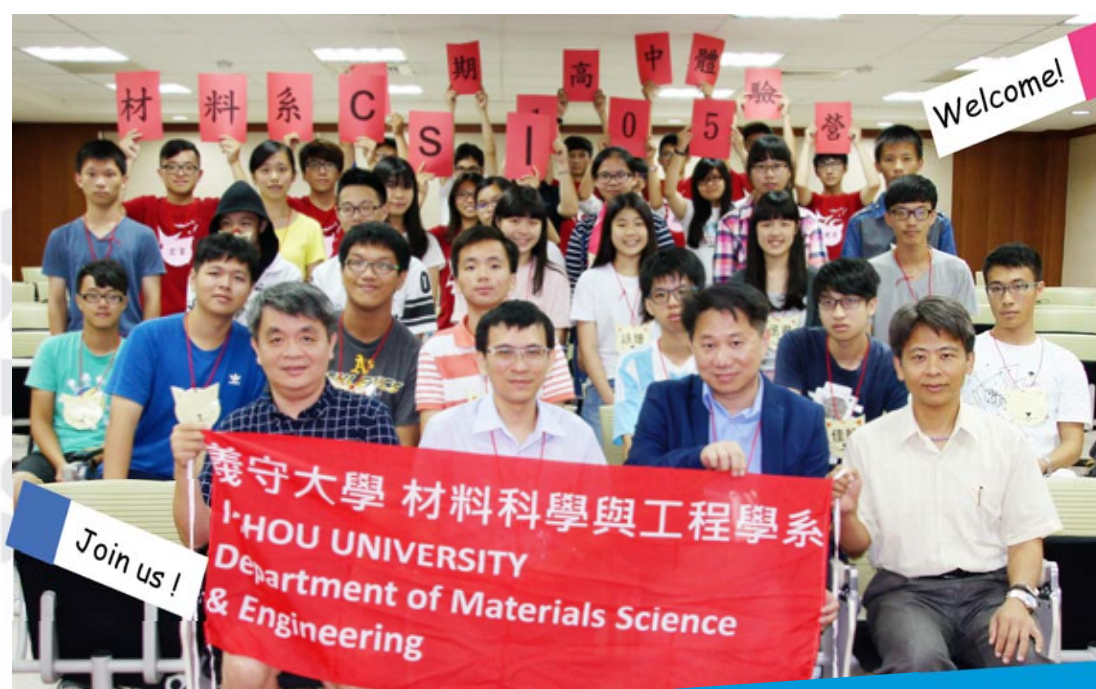

In class, teachers care about how much we understand, so they usually take simple examples to improve our understanding. No matter where we attend lectures, in a classroom or a computer lab, teachers always clarify concepts first and let us practice in order to integrate practice into theories. In addition, there are a basketball team, a volleyball team, and a badminton team that we can join with like-minded friends. When I was a junior student, I served as a cadre member of the student association of the Department, and I helped classmates and teachers build a better relationship by holding activities, made nostalgic classmates feel homelike, and improved my leadership and management skills. In short, I sincerely invite you to be part of us!

Department of Materials Science and Engineering 材料科學與工程學系

學系介紹 Introduction

According to the survey released by a job bank, graduates from departments of materials science are in great demand because materials science and engineering is the foundation of many fields, including information and communication, mechatronics, energy, chemical and materials engineering, national defense, and civil engineering. Therefore, graduates of the Department do not have to worry about their employment in the future. The IEET-accredited Department has up-to-date laboratories and facilities in central and southern Taiwan. There are 16 professional laboratories offered to students for practical training. Diverse fields are covered in our curriculum, such as metals, electronics and opto-electronics, and multifunctional materials. With the resources of E United Group and technology industries in the neighborhood, we are able to provide internship and employment opportunities for our students. In addition, students may take part in the "Steel and Iron Program" with munificent scholarships and secure employment at E United Group right after graduation to put what they have learned into practice. Our graduates are competent to work in the fields of semiconductor, opto-electronics, metals, biomedicine, and plastics with good payment. Undergraduate students can also apply for concurrently taking master's courses to acquire both the bachelor's and master's degrees in five years.

實習單位 Internship Providers

Affiliates under E United Group: Yieh United Steel Corp., Yieh Phui Enterprise Co., Ltd., Yieh Hsing Enterprise Co. Ltd.

Technology-related corporations in the neighborhood: ASE Group, Chipbond Technology Corporation, Kaohsiung Opto-Electronics Inc.

畢業出路 Future Perspectives for Graduates

Further Education

About half of our graduates choose to pursue master's and doctoral degrees in domestic and international universities, around 70% of whom were admitted to national universities.

* Steel industry and metals manufacturing industry

Department of Industrial Management 工業管理學系

學系介紹 Introduction

The Department was established in 1990, and it offers a doctoral program, a master's degree program, an in-service master's degree program, and daytime and evening undergraduate programs. Industrial management can not only check the health of an industry but integrate human resources, materials, methods, equipment, time, and resources in order to help an industry achieve rationalization and effectiveness.

Our curriculum covers three different fields: Operations Management, Decision Management, and Human-centered Management. Students may choose one of them depending on personal interest and aptitude.

I-Shou University stands adjacent to the Southern Taiwan Science Park, the Nanzih Export Processing Zone, and the Renwu Industrial Park, and it has a close collaborative relationship with E United Group, ASE Group, Primax Electronics Ltd., and many companies are our internship partners. With continuous effort, the University successfully earned the AACSB accreditation, and it is the 755th university earning the accreditation in the world, the 14th in Taiwan, and the 4th in central and southern Taiwan. Apparently, the teaching quality of the College of Management is internationally recognized.

Department of Finance 財務金融學系

學系介紹 Introduction

The Department holds the "Lectures on Finance," inviting CEOs and senior managers from financial holdings, banks, securities companies, and insurance companies to give lectures. With that, students can have a better understanding of the real financial world and build interpersonal networks.

1. The Department designs its curriculum with theories and practice, emphasizing both lectures and experiments. To satisfy the need for generalization and specification, our curriculum covers financial management, investment, and finance.
2. The Lab for Securities and Finance Teaching established by the Department provides various professional software and databases for students. In addition, each computer has a dual monitor so that students can practice along with demonstrations and have better learning outcomes.

I-Shou University successfully earned the AACSB accreditation, and it is the 755th university earning the accreditation in the world, the 14th in Taiwan, and the 4th in central and southern Taiwan. Apparently, the teaching quality of the College of Management is internationally recognized.

未來職涯規劃 Career Planning

- To pursue further education in the field of finance, business administration, international business, management of technology, etc.
- To secure employment in the public sector, or in the sector of finance, financial management, auditing, business operation, etc.

在學生的話 Student Speak

Cheng-Wang Chuang, graduated from Kaohsiung Industrial High School

It was lucky for me that I chose to study here because our teachers have an active attitude towards teaching and have various specialties. They are willing to answer our questions and integrate news into lectures so that we can not only acquire theories mentioned in textbooks but also have a better understanding of the real world. Moreover, the Department provides us with various software and up-to-date facilities. The software is installed for specific purposes. For instance, the course "Securities Investment Analysis" teaches us how to use stock software to analyze the stock market. In the sophomore year, I joined the student association of the Department to help the Department with different events. With these interesting events, the relationship among classmates has become closer. The Department is a happy family, and we all have a great learning experience here.

Department of Accounting 會計學系

學系介紹 Introduction

Accounting is the language of business, and it is indispensable to the operation of business entities or organizations in order to provide business entities and investors with correct and accurate information. Therefore, we can say that accounting is the foundation of management, and accounting is one of the required courses offered at the College of Management. The Department aims at fostering certified specialists in accounting, taxation, and auditing equipped with diverse managerial skills and an all-around competitive advantage. In addition to accounting and auditing, finance and management-related courses are covered in our curriculum. With diverse courses, students can broaden their horizons and promote positive self-esteem. With continuous effort, I-Shou University successfully earned the AACSB accreditation, and it is the 755th university earning the accreditation in the world, the 14th in Taiwan, and the 4th in central and southern Taiwan. Apparently, the teaching quality of the College of Management is internationally recognized.

實習與參訪活動

Internships and Field Trips

Our graduates may pursue further education or enter the workforce depending on personal interest and aptitude. To help our graduates secure employment, we have several plans as follows:

1. Internship: The Department recommends outstanding students to take an internship at big accounting firms (e.g., Crowe Horwath LLP), and these recommended students may be offered a full-time position if their performance is recognized.
2. Field Trip: The Department arranges for students to take field trips to prestigious companies in different fields, including manufacturing, services, and accounting, such as Crowe Horwath LLP, Deloitte Taiwan, Dignity Accounting, Cheng De CPAs Firm, Yuanta Securities, etc.
3. Speech: The Department invites scholars and specialists in related industries to give speeches.
4. Career Planning: The Department recruits career counselors and advisors and organizes career planning discussion panels for students.

在學生的話

Su-Chin Cheng, junior student, graduated from Kaohsiung Municipal Sinsing Senior High School

After the university entrance examination, I hesitated about which discipline I should choose, accounting or finance. In the end, I chose accounting, and I believe that that was the best decision I have ever made. From a freshman to a junior student, my interest in accounting grows every day, and accounting has become part of my life. In my opinion, college life is an important stage in one's life. Some people can acquire professional knowledge and skills in college to face future challenges, while others may make themselves degenerate. Therefore, we must know what we really want before achieving that goal.

Department of International Business 國際商務學系

系主任的話

Welcoming Message

The Department aims at fostering specialists with international perspectives through three specific domains we design for students, including international economics, international business, and international trade regulations & practice. Our curriculum puts emphasis on the practice of international finance and international marketing. Students are expected to gain professional knowledge and a positive attitude and equip themselves with international mobility in the coming four years here.

未來工作方向

Future Perspectives

startups, trade companies, logistics companies,
customs broker companies
banks, securities firms, venture capital firms
government employees, international exhibitors
international companies
further education at domestic or foreign graduate
schools

在學生的話

Kuan-Yin Chen, junior student, graduated from Kaohsiung St. Paul's High School
I remember that when I entered the Department three years ago, I had no idea what international business is. Now, I realize that I did learn a lot here and had a fulfilled campus life. In addition to school lessons, I took part in club activities and student association events, which was beneficial to my skills in solving the problems I confronted and receiving setbacks. All of that will become part of my life experience and help me grow. Welcome to join us!

Department of Public Policy and Management 公共政策與管理學系

學系介紹 Introduction

The Department has been working on becoming the main research and educational cradle of public affairs management in southern Taiwan. In 2016, the College of Management successfully earned the AACSB accreditation; apparently, the teaching quality of the College and the Department is internationally recognized. In terms of our educational objectives, to confront the challenges posed by globalization and the new knowledge-based economy, we aim at nurturing specialists in policy formulation, analysis or management of the public sector, non-profit organizations, and the private sector through interdisciplinary training and the integration of theories and practice. Our graduates are equipped with professional knowledge of public affairs, basic work experience, and research skills in public affairs. Therefore, they can take civil service examinations or work as a policy analyst, assistant to legislators, public relations counselor, pollster, or manager of the public or private sector or non-profit organizations.

Chih-Jung Lin, junior student, graduated from National Kangshan Senior High School

The Department is like another family to me. Our teachers are cordial to us, and they are earnest about teaching us with current events so as to equip us with sensitivity to public affairs and political efficacy. We are greatly encouraged to read journals as many as possible to expose ourselves to diverse public issues. In addition to academic studies, I joined the student association of the Department and held many activities, such as the camping for new students and summer and winter camps for elementary school students. Through these activities, the coherence among students was achieved and the relationship between teachers and students was cemented. The Department not only provides me with professional teachers and adequate facilities but creates a warm and joyful learning environment. Come and join us!

Department of Mass Communication 大眾傳播學系

未來出路

Future Perspectives

Most of our graduates devoted themselves to mass communication-related jobs, such as executive producer, film director, photographer, journalist, radio broadcaster, marketing planner, magazine editor, and public relation practitioner. In addition, being a government employee or pursuing further education is another option for graduates.

To Become a Specialist with Five Specialties
Do you want to become part of media people? Don't you worry that having one specialty is not enough for future employment?

1. The Department aims at fostering specialists in interdisciplinary fields, including photography and production, broadcasting, digital multimedia, journalism, and advertising of public relations with our faculty members, the curriculum, and facilities.
2. Choosing the Department, you can enjoy diverse lectures and figure out your future direction. Our interdisciplinary training can give you more opportunities in the future.

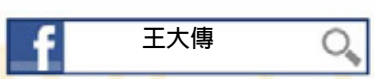

在學生的話 Student Speak

Yi-Ting Huang, graduated from National Hsin Hua Senior High School

If someone asks me that what I have learned at the Department of Mass Communication, I would say that I not only gained professional knowledge from teachers but also made my dreams come true with a group of friends I made here. Although I had a busy campus life, I felt satisfied and happy. Collaboration, sharing, and understanding are indispensable characteristics for us, and I will not let go any of it even after I enter the workforce in the future.

Department of Film and Television 電影電視學系

學系課程規劃 Introduction

The curriculum is designed to cover different aspects of film and TV, such as production, direction, recording, editing, lighting, art and design, and marketing, offering professional courses, and to provide opportunities for students to take part in joint production, microfilm production, and internships. To cultivate the core competence of students, we have designed two special fields, "Direction & Production" and "Film & TV Production." Before graduation, students are required to produce a graduation film and a full-length play in order to show their learning outcomes for the past four years. The curriculum of the field "Direction and Production" includes: Genre Film Analysis, Introduction to Literature, Advanced Screenplay Writing, Storyboard Design, Introduction to Drama, Acting for Screen, Voice and Movement Training, and Making Micro Film.

As for the field "Film and TV Production," the curriculum covers Film Recording, Mixing Post-production, Incidental Music, Film Modeling and Makeup, Film Editing, and Film Production. In addition, there are required courses for students of both fields, including Film Theory and Aesthetics, Genre Film Analysis, Asia Films Analysis, European Films Analysis, Film Marketing and Publication, National Film System, History of Film, and Independent Short Film Production. As the Department is part of the College of Communication and Design, students can take interdisciplinary courses offered by the Department of Digital Media Design, the Department of Mass Communication, and the Department of Creative Production Design in order to equip themselves with other skills and a competitive edge for future employment.

在學生的話

Chia-Lin Chung, sophomore student, graduated from Kaohsiung Municipal Tsoying Senior High School

The Department grows steadily and prosperously with a well-developed curriculum and an excellent learning environment in southern Taiwan, where the resources of film and TV are not as many as those in northern Taiwan. Our teachers have their own specialties, and they always teach us in an easy-to-understand way with theories, and they also encourage us to have an in-depth discussion with them after class. With the support from the student association and the Department, we can enjoy a lot of learning resources. If movies are a dream of yours, welcome to join us and have an adventure!

Department of Digital Media Design 數位多媒體設計

學系介紹 Introduction

The Department aims at nurturing specialists in digital media creation and design equipped with creativity and logical thinking by providing diverse courses on media design in order to meet the current and future needs of related industries. To cultivate young professionals in media design who are equipped with cutting-edge theories and practical experience as well as professional ethics and competence in content development, the Department offers two groups: Digital Animation Design and Interactive Media Design, in the hopes of combining aesthetics and different professions. The specific goals of the Department are:

1. To improve the academic research of the Department to meet the international standard.
2. To foster specialists in media equipped with theories, practical experience, professional ethics, and competence in content development.

To cement the relationship with the industry and the government in order to assist the government in promoting industrial development and the quality of media design, and to present a professional, hospitable, and pioneering image of the Department.

生涯規劃與展望

Future Perspectives

The digital content industry is one of the industries being strongly promoted by the government. The government even established a software and cultural and creative industry cluster to promote the development of media design and create more job opportunities. Our graduates may:

1. **Secure employment:** The Department takes the global job market into account while helping students make a career plan, hoping that graduates will become specialists in international digital content with our training. Graduates of the Department may work as a programmer, art designer, animator, planner, and project manager in the field of animation, game, video, mobile devices, publication, or e-learning.

Pursue further education domestically or overseas: Graduates who are interested in academic theory may pursue further education in domestic or international graduate schools.

在學生的話 Student Speak

Tzu-Yi Wu, senior student, graduated from Deguang Catholic Senior High School

The Department is a lovely and friendly family. Our teachers are not only diligent in academic research, but they are also willing to share their valuable experience with us. College is a great place for self-directed learning, and the Department offers many activities to us to learn. For instance, the Department holds achievement exhibitions at the end of every semester, and many officials of the University, as well as guests from outside the University, are invited to attend the event and give us comments and suggestions. The Department also provides international internships and field trips to corporations so that we can know the trend and the development. In the past three years, I have learned so many professional skills and life principles. Welcome to join us!

Department of Electrical Engineering 創意商品設計學系

學系介紹 Introduction

Creativity is not only the development trend of the 21st century but the stimulus given to the transformation of industries and the sustainable development of corporations. The Department aims at cultivating specialists in product design with artistic literacy, creativity, and innovation. Our cultivation includes three aspects:

1. Promoting cultural characteristics and combining the need of local industries with design in order to equip students with humanistic and artistic literacy and to boost product values.
2. Promoting creative thinking and following the trend of technological development in order to equip students with professional knowledge and design skills to promptly seize opportunities.
3. Integrating innovation with modern design theories to equip students with competent skills and a competitive edge in the workplace.

Department of International Business Administration 國際企業經營學系

學系介紹 Introduction

The Department was established under the International College to cultivate specialists in professional business administration who are innovative, have an international competitive edge, and gain cross-cultural experiences. The International College provides students with a total immersion learning environment in English, a stellar case of international teaching staff, especially designed courses, and opportunities for studying abroad to equip them with professional knowledge, cross-cultural adaptation, international communication skills, and extensive horizons. Students of the Department can experience diverse teaching methods, including but not limited to creative lectures, interactive discussions, digital learning materials, and studying abroad. All courses are taught in English, and students can experience different cultures by interacting with faculty members and classmates from different cultural backgrounds.

生涯規劃與展望

Future Perspective

Graduates of the Department can enter the workforce or pursue further education in Taiwan or other countries. With our four-year training in relevant professional fields and English skills, we believe that they will succeed in any industries or academic fields.

Department of International Finance 國際財務金融學系

學系介紹 Introduction

In order to cultivate specialists in finance with international mobility, the Department recruits scholars specializing in finance and economics around the world for a total immersion learning environment in English. Many alumni, before graduation, pursued further education and broaden their horizons by studying abroad at partner universities in Europe, the U.S., and around the world. The curriculum covers training in finance, English skills, information technology, and project writing. With an English-only learning environment and comprehensive four-year training, students have a great competitive edge. In addition, we also offer international trade and finance-related employment programs, lectured by dozens of lecturers recruited from industries, and internship opportunities to senior students. Many students have secured employment before graduation because of their excellent English and analytical skills.

Department of International Tourism and Hospitality 國際觀光餐旅學系

學系介紹 Introduction

Foreign language skills have become an indispensable competence in the workplace, so the Department takes English as the main language for teaching and communication. The Department has recruited specialists in relevant fields with rich teaching experience to teach, and all professional required courses are taught in English only. We encourage our students to take part in exchange programs to broaden their horizons, improve foreign language skills, and even pursue further education overseas in the future.

With continuous effort, I-Shou University successfully earned the accreditation, and it is the 755th university earning the accreditation in the world, the 14th in Taiwan, and the 4th in central and southern Taiwan. Apparently, the teaching quality of the International College is internationally recognized.

在學生的話 Student Speak

Wen-Chien Lu,
sophomore student, New Taipei Municipal Yongping High School

An English-only learning environment and the curriculum are the reason why I chose the Department of International Tourism and Hospitality under the International College. After entering the International College, I felt that the atmosphere here was apparently different from that of other colleges. Here is a microcosm of the global village. I meet teachers and classmates coming from different countries, learn different thoughts and voices, experience diverse cultures, broaden my horizons, and make my college life more colorful.

Tzu-Hsien Yang, senior student, graduated from Li Ming High School

Have you ever felt anxious about college life? I did, four years ago. Fortunately, I did learn a lot at the Department of Culinary Arts Management, develop my interests, and work towards my dream. The Department offers a rich and diverse curriculum. Not only did it put emphasis on professional skills but also focus on theories. The internships arranged by the Department provide us with an opportunity to put what we have learned into practice and have more valuable experience in the workplace. With four-year training at the Department and substantial learning resources provided, I believe that I have a great competitive edge for the future. Although we may have different goals, the Department is able to give us counseling and lead us to the future we want.

Department of Biomedical Engineering 生物醫學工程學系

學系介紹 Introduction

Biomedical engineering is the application of theories and technologies of medicine, engineering, and basic research to disease diagnosis/treatment, medical equipment, and the research and development of tissue replacement materials. The Department aims at nurturing specialists in biomedical engineering equipped with professional ethics to meet the demand of future medical services, in the hopes that more and more people can benefit from the integration of biomedical sciences and engineering.

Welcome to the Department of Biomedical Engineering, where you can put what you learn into practice, especially to human bodies. With the aging society and the increasing demands for the quality of life and health, the Department plays a significant role in improving the standard of medical care. Our curriculum covers three disciplines, including biomechanics, biomedical materials, and bioelectronics & bioinformatics, and students can choose one of them to study and join a professor's lab depending on personal interest. All our teachers encourage us to ask as many questions as possible, and they are willing to help us solve problems. College life is not just about learning. There are various activities held by the student association waiting for your participation. You are welcome to be part of this family!

Department of Medical Imaging and Radiological Sciences
醫學影像暨放射科學系

學系介紹 Introduction

With the development of medical technologies, diagnostic radiology, radiation therapy, and nuclear medicine play an extremely important role in clinical applications, and medical imaging and radiological sciences have become an indispensable part of clinical medicine. The Department was established with the aim of nurturing specialists in medical imaging and radiological sciences with theories and hands-on experience to get involved in clinical medicine and research required by domestic medical institutions related to radiology, medical imaging, and radiological sciences and improve the medical quality in Taiwan. The Department puts emphasis on several aspects, including diagnostic radiology, radiation therapy, nuclear medicine, medical physics, medical image analysis, ultrasound skills, radiometry, isotopic tracer techniques, and radiopharmacology.

Department of Physical Therapy 物理治療學系

學系介紹 Introduction

The Department, established in 2002, was the first department named "Physical Therapy" in Taiwan, and our curriculum covers three major medical fields: prevention, treatment, and rehabilitation. In addition to the four core courses, i.e. orthopedics, neurology, pediatrics and cardiopulmonary system, the curriculum focuses on two major directions, *Sports Leisure Therapy* and *Physiotherapy Clinic Operation*, in the hopes of nurturing all-around physical therapists.

Our graduates may work as a clinical physical therapist at hospitals or a self-owned clinic after being certified or in the field of health administration, long-term care, professional sports, health care or education.

Chen-En Huang, freshman student, graduated from Taipei Municipal Zhong-zheng Senior High School

Frozen shoulder, tennis elbow, cervicogenic headache, stenosing tenosynovitis, and sports injuries are common pain conditions that can be alleviated with physical therapy. In class, teachers taught us how to ease patients' pain with our own hands. Since we don't need any equipment to make a diagnosis, many friends and family could benefit from what we have learned at home. In addition to academic studies, the Department often holds different extracurricular activities, such as the camping for new students, Christmas party, experience sharing from alumni, and diverse speeches, so that we can gain more knowledge other than physical therapy. Welcome to join us and become an excellent physical therapist in the future!

Department of Occupational Therapy 職能治療學系

學系介紹 Introduction

The Department was established with the aim of meeting the current and future needs of the society and medical treatment for senior citizens, nurturing occupational therapists equipped with humanistic qualities, social caring, independent thinking, self-development, professional knowledge, and clinical skills, in order to provide quality occupational therapy and improve the medical standard and living quality in Taiwan.

The curriculum offered by the Department was designed based on the structure released by the World Federation of Occupational Therapists (WFOT), covering physically occupational therapy, psychologically occupational therapy, and occupational therapy for children. Having taken social needs into consideration, we provide two special fields, "occupational therapy for children and school system" and "occupational therapy for geriatric and community system." The Department has earned not only the program accreditation conducted by the Ministry of Education but the WFOT accreditation. With our specially designed curriculum emphasizing humanistic qualities, professional knowledge, and hands-on experience, great occupational therapists are nurtured here.

The Department provides us with a diverse learning environment. In addition to general courses, there are many specially designed courses. In "Group Dynamics," we are trained how to lead a group and do activities. In "Geriatric Services," we visit long-term care facilities and interact with elders. In "Assistive Technology," we learn how to make insoles and other assistive devices. Apart from lectures, our teachers invite specialists in different fields and alumni to share experience and knowledge with us. Up-to-date technology is adopted in lectures as well. Extracurricular activities held by the Department is another way to help us with self-development, too.

Department of Nutrition 營養學系

學系介紹 Introduction

As more and more people are paying attention to healthy eating, the role of dietitians has become more important than ever. The Department is under the College of Medicine and adjacent to E-Da Hospital, E-Da Cancer Hospital, and E-Da Dachang Hospital. The Department is the best nutrition-related department in southern Taiwan; for many years, our graduates passed the Senior Professional and Technical Examination for Nutritionists with flying colors. The Department was established in 2004 and provides students with two specific tracks, Clinical Nutrition and Food & Nutrition. Our diverse and adequate practicums and close relationship with industries can make you a specialist demanded by employers.

豐富多元的實務課程

Diverse Practicums

Practicum in the kitchen: nutrition, catering service, food processing, diet therapy, Chinese medicated diet, etc.
 Nutrition education in communities, senior high schools, junior high schools, and elementary schools
 Internships in hospitals in Taiwan (E-Da Hospital, Chang Gung Medical Foundation, Veterans General Hospitals, Chi Mei Medical Center, National Cheng Kung University Hospital, etc.)
 Training for certification of dietitians, food technicians, technicians for Chinese culinary, HACCP

密切的產學合作

Yi-Hsien Chen, senior student, graduated from HuaDong Taiwan Businessman's School

Being part of the Department, I made a lot of friends who have the same goal as I do. We learned together and had fun together. After class, we also joined the student association and took part in many activities. The diverse curriculum designed by our Department equips us with professional knowledge with respect to nutrition and food. I am glad to study here because I have not only gained practical knowledge but established contacts.

Ying-Tzu Chen, junior student, graduated from Ling Tung High School

After joining the Department, I have experienced a colorful campus life. Teachers' kindness and dedicated teaching provide us with an excellent learning environment, and we have taken many practicums and were offered many opportunities to acquire professional certificates. In addition, I also joined the student association and held activities for participants from elementary schools, junior high schools, and communities. Through these activities, I not only put what I have learned into practice but improved my communication skills. I am lucky to be part of the Department.

Chi-Feng Huang, sophomore student, graduated from Guoguang Laboratory School, National Sun Yat-sen University

The curriculum designed by our Department provides us with a solid foundation and equips us with a competitive edge for future employment. In addition, rich and diverse activities of the student association made my campus life fun and fulfilled. I really like here!

ISU 義守大學 Department of Healthcare Administration 醫務管理學系

學系介紹 Introduction

To meet the demands of the aging society, health insurance policies, and the healthcare administration industry, the Department provides two special fields, *Medical Institution Management* and *Senior-oriented Management*, for students to improve their competitive edge and become specialists in a medical institution and long-term care facility management with resources provided by E-Da Hospital. Our graduates may either work on planning and management at medical institutions, long-term care facilities, the senior-oriented industry, health-related organizations or the public sector, or go to domestic or overseas graduate schools for further education, such as healthcare administration, business administration, human resources management, public health, health management and policy, health and welfare, and health informatics.

校園到職場無縫接軌

Comprehensive Learning Counseling

Counseling for professional certification, study groups, seminars on career planning, scholars and specialists' speeches, field trips, on and off-campus competitions, hospital and community services, seminars on pursuing further education/seeking employment, counseling for job interviews, experience sharing by alumni, etc.

Preparation for the Workplace

*Internship opportunities provided by some 30 hospitals and long-term care facilities, including National Taiwan University Hospital, National Cheng Kung University Hospital, Kaohsiung Medical University Chung-Ho Memorial Hospital, Chi Mei Medical Center, Chang Gung Medical Foundation, Kaohsiung Municipal Ta-Tung Hospital, Yuan's General Hospital, and Pingtung Christian Hospital

*Working with E-Da Hospital to nurture elites.

BS and MS Degrees in Five Years

Senior students may apply for becoming preparatory graduate students and receive an MS degree after one year of study in the master's degree program of the Department and meeting the graduation requirements.

在學生的話 Student Speak

Fang-Ling Liu, first-year master's student, graduated from Hung Jen Catholic's Girl High School

The Department is the place where I gain knowledge from lectures, field trips, and experience sharing of practitioners and enjoy a happy and fulfilled campus life. The continuous internships starting from the junior year is the most solid foundation for my future career and interpersonal networks. We are looking forward to seeing you here!

Yun-Tzu Liu, preparatory graduate student, graduated from National Hsin-feng Senior High School

In addition to rich resources and diverse courses offered by the Department, I joined the student association of the Department to train myself, understand the spirit of self-autonomy, and discover my future career path with extracurricular activities and experiences.

Wan-Ting Li, junior student, graduated from Kaohsiung Municipal Nanzih Senior High School

Hui-Wen Yang and Hsiao-Pei Lin, junior students, graduated from Kaohsiung Municipal Siaogang Senior High School

The Department not only arranged for us to take an internship at hospitals and care centers but also encouraged us to take part in national healthcare administration workshops. Through these experiences we have broadened the horizons and found our way to the future.

Department of Health Management 健康管理學系

學系介紹 Introduction

"The first wealth is health. He, who has health, has hope. And he, who has hope, has everything." This is a famous quotation from Ralph Waldo Emerson, and it indicates that health management is an important lesson for us and a foundation for a happy life. The Department, established in 2004, was the first department in Taiwan that focuses mainly on health management. In the hopes of nurturing specialists in health management demanded by related industries, we emphasize two distinct domains, *Health Behavior Promotion* and *Health Industry Management*.

Our graduates are equipped with health management skills and the ability to make health promotion plans. Therefore, they may become certified health managers or occupational health management specialists to promote health promotion activities in the workplace, communities, hospitals, government health agencies, or health-related industries.

Department of Nursing

學系介紹 Introduction

The Department was established in 1999 with the aim of nurturing nurses equipped with professional knowledge and skills, humanistic qualities, enthusiasm, and leadership. To improve our teaching quality and help students grow and learn, we provide an excellent and cozy learning environment, up-to-date equipment and facilities, professional and e-learning classrooms, interactive teaching methods, and a mid-term teaching survey. At present, most of our graduates are working as nurses in hospitals around Taiwan, and some of them are pursuing further education.

Department of Medical Laboratory 醫學檢驗技術學系

學系介紹 Introduction

The curriculum of the Department can be divided into four stages: basic research, basic medical sciences, clinical specialty, and clinical internship. To nurture medical laboratory scientists with international competitiveness, diversity is the core of our curriculum, and the professional subjects of the Senior Professional and Technical Examination for Medical Technologists are emphasized. Students can have clinical internships and put what they have learned into practice at the hospitals run by E United Group. Moreover, internship opportunities at domestic and overseas industries are offered on summer and winter vacations.

多元畢業出路

Future Perspectives

Our graduates can take the special exam of medical laboratory scientists held domestically or overseas. Once they have passed the exam, they can work as a medical laboratory scientist at hospitals, clinical laboratories, health centers, blood donation centers, and government agencies. Rigorously trained by the Department, our graduates are competent enough to work at biomedical laboratories, forensic units, environmental analysis laboratories, teaching/R & D institutions, biotechnology companies, and medical equipment manufacturers. For those who want to pursue further education, they may study at home or abroad or a program of post baccalaureate medicine.

在學生的話 Student Speak

Chih-Yu Chan, freshman student

After joining the Department, I found that all teachers were enthusiastic about teaching. Compared with senior high school, college education provides more practicums. "Introduction to Medical Technology" is a course that helps us better understand what a medical laboratory scientist is through field trips to E-Da Hospital, panel discussions, and the production of microfilms. I also joined the student association of the Department and improved my organizational skills which could be helpful to me. The Department will hold various activities, such as the camping for new students and a uniform party, for us to know one another better. Welcome to be part of the Department and make your dreams come true!

School of Medicine

學系介紹 Introduction

The six-year curriculum of the School of Medicine is divided into four phases, which are basic sciences, basic medicine cornerstone courses, clinical medicine cornerstone courses, and core clinical medicine and clinical clerkships. The School of Medicine aims at nurturing general practitioners with enthusiasm for devotion to society and local communities and with worldwide-recognized academic research results by providing brilliant, innovative, and comprehensive medical education. Our curriculum not only puts emphasis on all-encompassing courses relating to medicine but offers students diverse clerkships to put what they have learned into practice.

多元畢業出路

Future Perspectives

After having graduated from the School and completed the specialist training, state-financed students will be assigned by the Ministry of Health and Welfare to practice for six years at medical institutions or public health centers where doctors are scarce. To nurture domestic doctors and health professionals, the School will collaborate with E-Da Hospital through several approaches, including providing more doctors and other types of health professionals. E-Da Hospital has long worked with Tri-Service General Hospital Penghu Branch and public health centers in Penghu and Pingtung, and they are the most supportive teammates if our graduates serve there in the future. I-Shou University provides state-financed doctors with diverse medicine-related programs for further education to improve the quality of local medical care and public health research. State-financed doctors will be given priority to work at E-Da Hospital as attending physicians once they have completed their mandatory terms.

Welcoming Message

Dr. Cheng-Loong

Specialties: Gamma Knife radiosurgery, stereotactic brain surgery, general neurosurgery, brain tumors, cerebrovascular diseases, trigeminal neuralgia treatment

The School of Medicine is the fourteenth department under the College of Medicine after its establishment was approved by the Ministry of Education in 2018, and we will start to recruit students from Academic Year 2017. In addition, E-Da Hospital has received an excellent teaching hospital accreditation and been recognized as a medical center-to-be in 2018, which shows that we are more than ready to provide students with comprehensive medical clinical training. As E-Da Hospital has been long devoted to healthcare services in remote areas, state-financed students can have a thorough understanding of the lack of medical resources and regional diseases through the projects E-Da Hospital carries out. We sincerely invite you to join us and become a good doctor with specialty and ethics. Let's work hard on improving the quality of medical care in areas with insufficient medical resources and facilitating the development of E-Da Hospital.

Department of Applied English 應用英語學系

學系介紹 Introduction

The Department of Applied English was established in 1999, and now we have 24 full-time faculty members (20 of them have a Ph.D. degree) and some 600 students in both daytime and evening programs. The Department aims at cultivating specialists who have competent English skills, including listening, speaking, reading, and writing, and professional knowledge of English teaching and translation and interpretation. In addition to professional skill courses, we also offer literature and culture courses to students with the aim of enhancing their humanistic qualities and their familiarization with the Western culture. Our graduates, with excellent English skills and great humanistic qualities, may pursue further education domestically or overseas, or secure employment in the field of English teaching, academic research, commerce, mass media, or translation and interpretation.

本系特色及生涯展望

Features and Future Perspectives

The Department offers two specialized fields, English Teaching and Translation & Professional English, and all courses are taught only in English (except translation-related courses) in order to foster specialists in the English language. To help students acquire both academic theories and practical experience, we have the Simultaneous Interpretation Lab and the Classroom of Multimedia Language Learning for professional training. In terms of future perspectives, the Department has entered into collaborative agreements with several domestic corporations in different sectors, such as manufacturing, publication, language learning, service, and technology, so as to provide students with diverse field trips and internship opportunities for future employment.

在學生的話 Student Speak

**Meng-Hsuan Chiang, senior student,
graduated from National Hua-Nan Commercial High School**

Congratulations! Welcome to a new stage of your life. I-Shou University is an internationalized institution of higher education with specific goals. Higher education is different from compulsory education. Many opportunities are offered here, but you are the one making the decision. As a member of the Department, basic English skills are not enough. We all need to improve ourselves to outshine others. With excellent faculty members, I believe that you can make great achievements here. In addition, senior students present a graduation play every year. Through this English-only performance, students can show what they have learned to all audience. Once again, welcome to join us and look forward to your own graduation play four years later.

Department of Applied Japanese 應用日語學系

學系介紹 Introduction

The Department of Applied Japanese was established in 2002 with the aim of fostering specialists in the Japanese language, and in 2007, the Department, consisting of daytime and evening programs, earned the program accreditation conducted by the Higher Education Evaluation & Accreditation Council of Taiwan. Our faculty members specialize in different fields, including Japanese teaching, business administration in Japan, and Japanese society. Some of our faculty members have received the Distinguished Teaching Award with excellent teaching performance and produced considerable research achievements. The Department puts emphasis on a) Japanese language teaching to equip students with competent Japanese skills, including listening, speaking, reading, writing, translation, and interpretation, b) business education to enhance their competitive edge for future employment, and c) social and cultural education to improve students' humanistic qualities through the introduction to the Japanese society and culture.

精彩的國際交流活動

International Exchange

- ✔ We have partnered with many universities in Japan and send some ten students with or without grants to take part in an exchange program in Japan every year.
- ✔ Students can find a study buddy among international students from 37 countries (around 40 are from Japan) to study together and understand foreign cultures.
- ✔ Arrangements for students to travel in Japan and take Japanese-taught courses.

在學生的話 Student Speak

Mei-Chieh Kuo, sophomore student, graduated from Li-Chih Valuable School

The Department is like a big family. I still remember that when I greeted one of our teachers with simple Japanese greetings on the corridor, the teacher also greeted me with a smile. Although it was merely a short conversation, I still felt excited and happy. I used to worry about my poor Japanese, but teachers always teach us with patience. In addition, in order to improve our Japanese skills, teachers teach with interesting methods and rich contents, and we do feel that our Japanese skills are getting better gradually. In the future, I look forward to taking a trip to Japan with my friends to enjoy delicacies and experience the culture in Japan.

International Bachelor's Degree Programs

- 51** 【 International Program on Intelligent Systems and Automation Engineering 】
- 52** 【 International Program on Communication Production 】

Join us!

Welcome!

ISU 義守大學

International Program on Intelligent Systems and Automation Engineering)
智慧化自動控制英語學士學位學程

學程介紹 Introduction

The English-taught Program focuses on big data, the Internet of Things, and automation engineering with a stellar cast of specialists recruited from different disciplines, including electrical engineering, electronic engineering, information engineering, communication engineering, information management, mechanical engineering, materials science, chemical engineering, financial and computational mathematics, and civil and ecological engineering. With the professional knowledge and research opportunities we offer, we incorporate mechanical and control theories, microcomputers, and sensing systems into curriculum design, in the hopes of helping Taiwan with the cultivation of specialists in intelligent systems and automation engineering. In terms of industry-university collaboration, we put the emphasis on e-commerce, biomedical sciences, information engineering, and traditional industries. Furthermore, we plan to provide students with internship opportunities in multinational corporations in order to train technicians and specialists demanded by industries.

IOP Robotic Technology Co., Ltd.

設立原由 Background of Establishment

"Smart Engineering Technology" is a technology integrated with software, sensors, inspection, online monitoring, and dynamic control to control and improve the efficiency, precision, reliability, and stability of machines so that products can be produced through automated production equipment. It is a complex technology with many potential applications, such as precision machinery, electromechanical instrumentation integration, precision measurement, and sensing technology.

Nowadays, more and more industries make use of automated production technology, including vehicles, home appliances, molds, aerospace, electronic products, biomedicine, green energy, and space satellites. Therefore, the Program is established with the purpose of nurturing specialists demanded by future society and the international community.

ISU 義守大學

International Communication Production Program
傳播產製英語學士學位學程

學程特色 Program Features

Built on a solid theoretical foundation of international mass communication, the Program provides students with an English-only learning environment and training in practical skills and applications.

It is our aim to educate students to become a specialist in modern communication with bilingual skills, professional knowledge, global perspectives, and independent thinking. The Program puts emphasis on two specific fields, Convergent Media & Production Studies and Digital Communication & Media Studies.

畢業出路

Future Perspectives for Graduates

1. Verbal communication: In addition to being journalists and editors, students may take courses on creative thinking in order to become an innovative specialist in commercial advertising.
2. Image communication: Students may learn about new image communication and information technology in order to become a photographer, director, film editor, animator or art designer.
3. Digital technology: Students may dedicate themselves to the digital content industry, working on graphic design, motion design, multimedia creation, or 3D animation.
4. Communication studies: Students may pursue further education, serve as a researcher in domestic or international organizations, or pursue a career in survey research.

系主任的話 Message from Department Chair

This is a generation of communication and cultural creativity. With the constantly changing communication and media environment, media education becomes more diverse, more delicate, and more digitalized. We need to nurture specialists in communication demanded by both the current and future society. The Program focuses on training in international communication skills and cultures. In terms of teaching and learning, we not only provide students with professional lectures but also ask students of the Department of Mass Communication to serve as peer tutors, telling you how to operate equipment and facilities and giving advice on your internship. If you are a vigorous and positive person willing to share your opinions with others and take part in cultural exchange, marketing, and creative communication as an international volunteer, you are more than welcome to join us and start shaping your future.
